1. Write a PHP script that compares two numbers and prints the larger number.
2. Write a PHP function to find the factorial of a given number.
3. Write a PHP script to reverse a string.
4. Write a PHP script that counts how many times a particular character appears in a string.
5. Write a PHP script that:
   Creates an array with the numbers from 1 to 10.
   Prints the sum of the array elements.
   Prints the highest and lowest numbers in the array.
6. Write a PHP script that prints all prime numbers between two given numbers.
7. Write a PHP script that prints the multiplication table for a given number.
8. Write a PHP script that creates an associative array with keys as fruit names and values as their colors. Then print all key-value pairs.
